

Selective Restore Manager Pro™ for SharePoint Backups

Restore individual documents and list items from native SharePoint backups – without building a SharePoint recovery farm

Selective Restore Manager Pro™ simplifies the process of restoring SharePoint content by allowing you to restore individual documents and list items as well as entire sites.

Selective Restore Manager Pro (SRM Pro) connects you directly to your native SQL Server backup files and lets you navigate through them as though they were live SharePoint sites. You don't need to rebuild your entire production database, or deploy a temporary SharePoint recovery farm, just to recover an individual document or list item.

You can recover documents, list items and even entire SharePoint sites directly to the production environment, or to any new SharePoint server, just by using the copy-and-paste process in a familiar user interface.

SRM Pro preserves related metadata, versions, views and permissions. It lets you make more productive use of your time and saves your organization money.

Key Features

- > **Easy to use**
Selective Restore Manager Pro has a familiar, tree-based, copy-and-paste style user interface that is similar to the Windows File Explorer. It's so easy you can perform granular restore operations easily and within minutes.
- > **Restore individual items and complete site hierarchies**
In one easy step it restores everything from an individual document or list item, up to and including complete SharePoint site collections, from a backup file.
- > **Restore all types of lists, libraries and sites**
Restore Document Libraries, Picture Libraries, Issues, Tasks, Contacts, Announcements, Discussions, Calendars, Surveys and Custom Lists from existing back-up files. SRM Pro also recovers all site types including team sites, meeting sites, document workspaces, publishing sites, wikis, and blogs.
- > **Respond faster to restore requests**
Use Selective Restore Manager Pro to open and browse existing SQL Server back-up files easily, as though they were live SharePoint sites. You can restore any item, document, or SharePoint site directly to the production environment without a temporary SharePoint recovery farm.
- > **Restore in place or out of place**
Restore documents and items directly to the original production environment, or to a new location within any live SharePoint server on your network. In the process, you can re-parent, or re-template sites.
- > **Retain valuable metadata**
SRM Pro preserves all views, version chains, metadata, permissions, and authorship information ('Created,' 'Modified,' 'Created By,' and 'Modified By' fields) when performing recovery operations.
- > **Connect directly to native SQL back-up files**
SRM Pro works seamlessly with your native SharePoint SQL Server back-up files. You don't need to use a proprietary back-up format, or rely on expensive third-party backup solutions, to restore granular items.

Business Benefits

- > Respond to restore requests in seconds
- > Avoid costly proprietary backup formats
- > Eliminate the hardware costs of a dedicated restore farm
- > Ensure Microsoft support for SharePoint

Features

- > Restores both individual items and complete site hierarchies
- > Restores all types of lists, libraries and sites
- > Restores in place or out of place
- > Retains valuable metadata
- > Connects directly to native SQL back-up files
- > Uses only Microsoft APIs
- > Lets you respond faster to restore requests
- > Lets you preview content prior to restore
- > Runs differential reports on back-up files
- > Easy to use
- > Simple to deploy

SharePoint Migration, Selective Restore,
and Archiving Solutions

metalogix.com

> **Preview content prior to restore**

SRM Pro allows you to preview documents and save them to your local disk directly from your SharePoint backups.

> **Run a differential report on your back-up files**

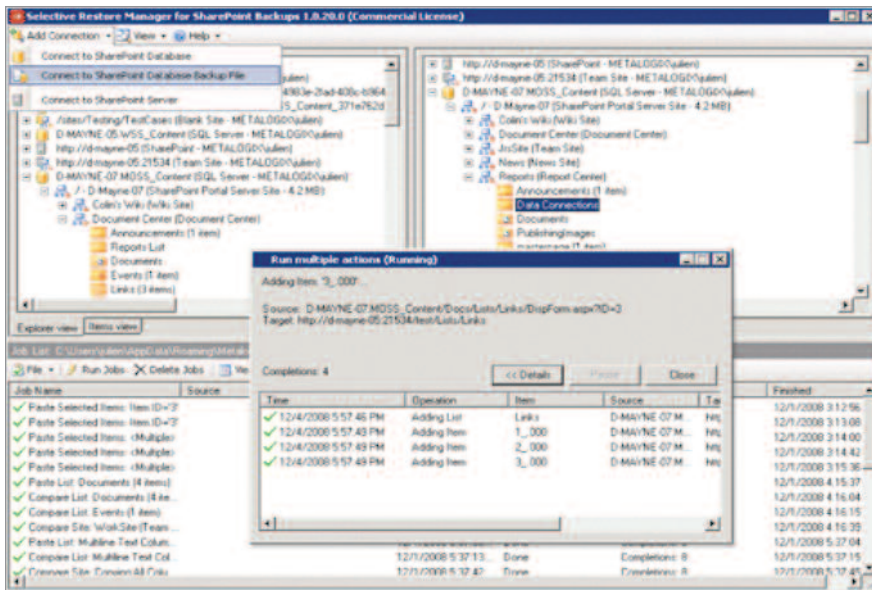

Speed up the process of reviewing backed-up data, with SRM Pro's powerful differential reports. You can see instantly what has been added, modified or deleted by comparing content between two backup files, or between a backup file and the live SharePoint site.

> **Microsoft API-Compliant**

SRM Pro performs all restore operations through the supported SharePoint APIs. There are no un-supported, direct writes to any SharePoint database. This ensures ongoing Microsoft support.

Supported Source Systems

- > Microsoft MOSS SharePoint Portal Server 2003/2007 SQL Backups
- > Microsoft Windows SharePoint Services 2.0/3.0 SQL Backups
- > Microsoft SharePoint SQL Server Databases

Metalogix Selective Restore Manager Pro restores individual documents and list items without a SharePoint recovery farm. That saves time and money – and makes you far more productive.
