Last Updated: May 26, 2009 WMM Build: 3.3.11

Migration Feature	Support Status	Service Install
<b>Supported Migration Content Sources</b>		
Any HTTP accessible content source. FileShare Migration Manager can import content from any HTTP accessible location, and will import content depending on how the crawler options are set.	Supported	
Any NTFS accessible file system	Supported	
<b>Content Analysis and Management Features</b>		
Dynamic property based querying (on any property value)	Supported	
Visual HTML content based analysis and extraction. Using the tools within FileShare Migration Manager, it is possible to select and isolate any visual content within a HTML page. This gives a greater flexibility in selection of content, that can be used during a migration. .	Supported	
A completely searchable and filterable List View. In FSMM's List View you can do searches and filters for any content that you want. You can filter any column property in or out, do a search for a word, a phrase, a file name, or a file type. Any content can be found using the search and filter tools, from one item to a group of items.	Supported	
A completely extensible actions framework. Aside from the out-of-box set of Actions, the FSMM actions framework allows for custom actions (see Custom Action integration) to be added. There is no limit for the number of custom actions that can be added to the framework, giving the application a greater flexibility.	Supported	
XSL transformations of XML and XHTML content	Supported	
Regex search and replace	Supported	
Integration with Excel for reporting and powerful metadata management	Supported	
List Item Field Value Report	Supported	
Correction of illegal file names	Supported	
Import and Export of CSV files for editing purposes. CSV files can be imported or exported for the purposes of editing, or adding content to a migration. A typical use, would be to export some content to a CSV file, send it to it's department and let that department make any necessary changes, and then import it back into the workspace with the updated material.	Supported	
Resource management for linked images and/or documents	Supported	

Last Updated: May 26, 2009 WMM Build: 3.3.11

<b>Migration Features</b>	<b>Support Status</b>	<b>Service Install</b>
Migrate to SharePoint Documents	Supported	
Migrate to SharePoint Custom Lists	Supported	
Migrate to File System	Supported	
Comprehensive logging of all migrations. Log files are created and stored for all migrations. These files give a breakdown of all actions that took place during a migration.	Supported	
Comprehensive field mapping from content sources to SharePoint	Supported	
Command line execution. Command Line execution is possible with FSMM. Whether the options are selected in the UI or through the command line, the running of the actual migration can be done through the command line. This allows for the migrations to be done "in batch" by being scheduled.	Supported	
Migration settings can be copied between items	Supported	
Migration settings can be preserved to facilitate re-migration	Supported	
Automated migration of resources that are associated with migrated web content	Supported	
User Mapping Across Active Directory Domains. Allows for users to be mapped across the Active Directory Domains during a migration. This lets multiple domains to be migrated together, as well as to migrate across to new domains.	Supported	
Limited Script crawling (JavaScript, Flash, Active X, VB script). Certain types of script can be crawled and migrated by FSMM. While there are a few different types of Script languages that can be migrated (JavaScript, Active X, Flash, etc.), FSMM only supports Client Side Script. Any script that can be interacted with on a page, is not supported.	Supported	
Migration of Created by and Modified by Metadata. You can copy documents and many types of list items to a target machine that does not have the Metalogix service installed, but the four edit information fields will not be preserved. The four edit information fields are: Created: The date and time that the list item was created. Modified: The date and time that the list item was last modified. Created By: The user who created the list item. Modified By: The user who last modified the list item.	Supported	Yes

<b>SharePoint Specific Features</b>	<b>Support Status</b>	<b>Service Install</b>
All interactions with SharePoint are remote. All standard interactions with SharePoint are done remotely, however, if the Metalogix Extension Service is used then some interactions with SharePoint are done through the Object model, which is local through the SharePoint site.	Supported	
SharePoint interactions through supported API's (ONLY)	Supported	
SharePoint Content Type editor. The SharePoint Content Type editor allows for content types to be created and edited within the workspace and within SharePoint. These content types can then be migrated to a target site.	Supported	
SharePoint approval status management	Supported	Yes
SharePoint Site collection creation	Supported	
Create/populate Areas in SharePoint	Supported	
Create/populate Folders in SharePoint	Supported	
Custom template support and mapping. Custom templates can be used during the migration. Before beginning your migration, please ensure that your custom template has been manually moved to your target site. Once there you can migrate and map content to the custom template.	Supported	

Last Updated: May 26, 2009 WMM Build: 3.3.11

Item Action and Metadata Features	Support Status	Service Install
Column Merging	Supported	
Comprehensive Content Search	Supported	
Custom Action integration (for customer created actions. It is possible to create your own custom actions for FileShare Migration Manager. Any custom actions that are created will be displayed in both the Actions Menu in the toolbar, and in the actions section when using the right-click function. For some sample custom actions, please contact Metalogix.	Supported	
Duplicate Item finder	Supported	
Replace value within a column	Supported	
Edit of content mappings	Supported	
Edit of column mappings	Supported	
Extraction of Metadata values	Supported	Yes
Document workspace for standard items	Supported	
List workspace for list-related items	Supported	
Rendered content view	Supported	
XHTML content view	Supported	
XML view	Supported	
Ability to strip content of XML nodes	Supported	
Ability to remove files from source location	Supported	

**Note:** The "Service" column indicates whether the features requires the Metalogix Extensions Service to be installed (the service ships with FileShare Migration Manager). Most features that use the service, require that it is installed on the target SharePoint server.

Your input is valuable to us. If you have a feature suggestion or request, please e-mail them to [support@metalogix.com](mailto:support@metalogix.com).
